

# Download Dermatology The Basis Of Diagnosis And Treatment

Atopic dermatitis in dogs is the most common canine allergic skin disease. [Click here](#) to discover the most popular canine atopic dermatitis treatments from expert Dermatology Specialist, Lauren Pinchbeck, DVM, MS, DACVD. Exposure to UV light: Whether from the sun or from an artificial source, such as tanning beds—is the most significant cause. Hyperpigmentation often starts to take hold during middle age when the skin starts to show the consequences of sun exposure, especially if sunscreen and other sun-protective measures were not used. Treatment. Most plantar warts are harmless and go away without treatment, though it may take a year or two. If your warts are painful or spreading, you may want to try treating them with over-the-counter (nonprescription) medications or home remedies. Vivida Dermatology is excited to be an integral part of the medical community in Southern Nevada and Southern Utah!
